3rd Annual Iowa Renewable Fuels Summit

Hosted by the Iowa Renewable Fuels Association

January 27, 2009

Polk County Convention Complex

5th & Grand Avenue, Des Moines

8:30 a.m. – 3 p.m.

Join us as we “Fuel the Truth” about biofuels!

***NEW HOURS!
LARGER TRADE SHOW!***

- **An Acre for An Acre? Implementing a Low Carbon Fuel Standard:** If an acre of land is converted to corn production, does an acre of Brazilian rain forest fall? Learn how this faulty logic is promoting the use of foreign oil and could kick ethanol out of key markets. Join us to learn the **Truth!**
- **RFS2: Holding Renewable Fuels to a Higher Standard?:** What fuel is more harmful to the environment and emits more greenhouse gas emissions? Gasoline or ethanol? If you guessed gasoline, then why does federal law hold ethanol to higher greenhouse gas standards than higher polluting gasoline? Join us to learn the **Truth!**
- **Beating the Blend Wall:** The U.S. ethanol industry will produce 1.5 billion MORE gallons of ethanol in 2009 than 2008, but where will it go? When will the biodiesel market reach saturation? Can we climb over this “blend wall” with E85, mid-level ethanol blends and B20? Join us to learn the **Truth!**
- **Linking the Value Chain:** Ethanol and biodiesel are becoming intricately interwoven. New technology may enable an ethanol plant to produce biodiesel from algae or a biodiesel plant to use its glycerin co-product to make ethanol. The biofuels industry is becoming linked together as never before. Join us to learn the **Truth!**

The Summit is Free ► Lunch Available for Purchase
